

SOLCOINS

FORTY-SEVEN YEARS AGO, IN GENEVA SWITZERLAND, SOMETHING HAPPENED. TWO THOUSAND MILES BELOW EARTH'S SURFACE, A RUMBLE WAS HEARD BY A YOUNG MAN WHO LIVES TO TELL THE STORY.

Date: October 2, 2068

I'm writing this to you today from Earth. Earth is still inhabitable however, I'd much rather be with the wealthier individuals who are able to live outside of this planet. Boy, do I wish I bought more Solana...

Governments still exist today, they all use ledger technology for data collection and storage. Every new civilian born has their identity inputted into 'The Ledger'. Central banks have been replaced by entities called 'Orgs'. Things have changed more quickly than I thought.

I've heard stories about people who owned significant amounts of other primitive digital assets such as Bitcoin and Ethereum. Some have attempted to change their identity. Other 'rogues' can't even speak with family members. Global governments have attempted hundreds of times to ban these currencies however nodes still run. People always find a way I guess...

IN TODAY'S WORLD, SOLANA IS THE PLANET'S MOST POWERFUL TECHNOLOGY. SOL IS EARTH'S RESERVE CURRENCY.

Back in '21, I was wandering around Geneva on a beautiful summer day. I remember seeing a bright yellow spark in what looked like an abandoned brick building with several large glass windows. I specifically recall squinting my eyes to see that there was an individual in the building. Curiously, I started walking towards the building when another bright spark went off, this time illuminating the entire floor of the building. I could more visibly see a man in a long white coat digging into the surface with a shovel. As I approached the window, I could see the man was wearing a metal shield over his face, a welding mask they called it. I stood outside one of the windows and watched in silence.

He continued to hastily dig for minutes, tossing the crusted soil to his side. The dust made it more difficult to see but I could see a glowing yellow light in the hole he created. He cautiously reached down and picked it up... it was a small circular object. The very first Solcoin. It was bright yellow, almost identical to what us humans see as the sun.

He kept digging and more Solcoins emerged. Of course they all still exist today. Some are held in historical museums, some by large corporations, some by individuals. But there was something different about that first one. The other coins were more of a golden color.

THAT FIRST ONE WAS AS BRIGHT AS THE SUN AND HAD A PATTERN ON IT. TO THIS DAY, IT'S STILL UNKNOWN AS TO WHO HOLDS THE FIRST SOLCOIN.
